

Database alignment preset

Manual constellation levels and block order

TYPE Database

LEVEL 1

Locations

L1 / 01

Foundational location entities.

lo_locations				
Name	Type	Attrs		
L location_id	int	PK NN	R	LOLOLI
L location_name	var 120	NN UN	R	
L site_code	var 24	NN	R	

Datasources

L1 / 02

Input sources and sensors.

ds_devices				
Name	Type	Attrs		
L device_id	int	PK NN	R	GWGWGI
L gateway_id	int	FK	R	
L device_name	var 120	NN	R	
L device_kind	var 40	NN	R	

Gateways

L1 / 03

Gateway and edge communication entities.

gw_gateways				
Name	Type	Attrs		
L gateway_id	int	PK NN	R	GWGWGI
L gateway_name	var 120	NN	R	
L last_seen	tstz	Dnow	R	

LEVEL 2

Maintenance

L2 / 01

Maintenance and machine entities that reference parent constellations.

mc_processes				
Name	Type	Attrs		
L process_id	int	PK NN	R	
L location_id	int	NN FK	R	
L process_name	var 120	NN	R	

mc_machines				
Name	Type	Attrs		
L machine_id	int	PK NN	R	GWGWGI
L process_id	int	NN FK	R	
L device_id	int	FK	R	
L gateway_id	int	FK	R	
L machine_name	var 160	NN UN	R	

LEVEL 3

History

L3 / 01

Historical samples that may reference far parent constellations.

hist_samples				
Name	Type	Attrs		
L sample_id	int	PK NN	R	LOLOLI
L machine_id	int	FK	R	
L location_id	int	FK	R	
L reported_at	tstz	NN	R

Legend

Constraints

- PK** Primary key
- FK** Foreign key
- NN** Not nullable
- UN** Unique constraint
- Dnow** Default value is now

Data types

- int** Integer number
- var n** Variable character text with maximum length n
- tstz** Timestamp with time zone

Link-blocks

Rows show compact badges with local arrows. Source badges jump to their target row when that row is on the current page.

```
ds_devices_gateway_fk
same-level auto -> link-block
ds_devices.gateway_id -> gw_gateways.gateway_id

mc_machines_gateway_fk
adjacent-level link-block -> link-block
mc_machines.gateway_id -> gw_gateways.gateway_id

hist_samples_location_fk
skip-level auto -> link-block
hist_samples.location_id -> lo_locations.location_id
```

Row anchors

Visible row markers use left and right side anchors.

Anchor count

66 stable anchors

Link examples

```
mc_processes.location_id.left
to
lo_locations.location_id.right

mc_machines.process_id.left
to
mc_processes.process_id.right

mc_machines.device_id.left
to
ds_devices.device_id.right

ds_devices.gateway_id.left
to
gw_gateways.gateway_id.right

mc_machines.gateway_id.left
to
gw_gateways.gateway_id.right

hist_samples.machine_id.left
to
mc_machines.machine_id.right

hist_samples.location_id.left
to
lo_locations.location_id.right
```

Comments

Link-block references render paired badges, local arrows, and source-to-target PDF jumps. Direct row-to-row arrows are intentionally pending.
